Art Unit: 3654

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claim 16 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Specifically it is not clear from the description how rotation of the cylinder can be adjusted to adjust the force of the web thereagainst as recited in claim 16.
- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In line 1 of claim 12, "the positioning device" is without antecedent basis.

 Apparently this claim was meant to depend from claim 11, not claim 10.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3654

- 6. Claims 1-2, 4, 6-9, 18-19, 21, 23-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Laughery. The tension sensing load cell 72 of Laughery senses tension force on cylinder 2 to control the drive of the web through rolls 104, 106, see the paragraph beginning on col. 5, line 41.
- 7. Claims 1-2, 5-9, 17-19, 22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Lee. The tension force on cylinder 5 of Lee is sensed by a piezo-electric sheet 20 that can be used to control the drive of the reel, col. 3, lines 16-23, to maintain the tension at a required value.
- 8. Claims 1-3, 6-9, 17-20, 23-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Yanagihara et al. The mechanism of Yanagihara et al senses tension by resistor 12 associated with cylinder device 4 to control the drive to the reel spools 1 and 2, see claim 1 for example.

Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over either of Laughery, Lee or Yanagihara et al. Whether the set value of the tension force in the devices of either of Laughery, Lee or Yanagihara et al is in actuality a "range" of values is seen to have been an obvious design consideration to one of ordinary skill in the art since a tension value of a running web could have been within a small range of values and still operate for its intended

purpose, such as during a fast rewind in a recording machine where a specific tension value is not absolutely required.

11. Claims 6, 9-10, 14-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lewis in view of Lee. Lewis discloses a tension control system in a cylinder having a cavity that accommodates the supply and takeup spools, Fig. 4, as well as a prior art system in which the cylinder accommodates the supply and takeup spools in separate cavities, Fig. 3. It would have been obvious to one of ordinary skill in the art to provide the cylinder 104 or 112 of Lewis with a surface mounted tension sensor as taught by Lee to provide better control of the tension in the web. Again with respect to claim 10 it would have been obvious to use a small range of values for the required tension setting in the device of Lewis, if not already so, since the device would still have operated for its intended purpose.

Allowable Subject Matter

12. Claims 11, 13, 25-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. These claims would be allowable since the prior art fails to disclose or render obvious a tension control system where either or both the supply and takeup rolls are physically moved to control the tension force.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John M. Jillions whose telephone number is (703) 308-2685. The examiner can normally be reached on M-F 9:15 - 5:45.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kathy Matecki can be reached on (703) 308-2688. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
